Alfa Romeo Engine
Each new Alfa Romeo is developed using the Quadrifoglio, the most powerful and competitive version, as a starting point. The first version is developed with the target of optimal 50/50 weight distribution in mind, featuring a longitudinal aluminum engine, a carbon fibre driveshaft and a series of patented technical solutions.

However, Alfa Romeo's own D-series radial engines of the early 1930s were not successful, and its 135 engine, an 18-cylinder air-cooled radial first run in 1938, suffered from reliability issues. Giustino Cattaneo had designed the 135, but he left Alfa Romeo in 1936, before the first engine was built.

With a kerb weight of less than 900Kg, Alfa Romeo 4C performance is all you could hope for it to be <span> </span> ! despite the relatively small 1.75-litre four-cylinder petrol engine. Breathing through a turbocharger it manages to produce 237bhp at 6,000rpm, and more importantly 350Nm of torque at a lowly 2,000rpm. That peak pulling figure continues flatly until past 4,000rpm as well.

Featuring the very best in cutting-edge innovation, Giulia Quadrifoglio and Stelvio Quadrifoglio truly represent the new paradigm of an ambitious new era for Alfa Romeo. Extensive use of ultra-light materials and an outstanding 2.9 V6 510hp Bi-Turbo petrol engine provide a superior power-to-weight ratio. The 50:50 ideal weight balance, and the return to the rear wheel drive, further improve handling and dynamism.
