Fruits and vegetables are some of the most expensive ingredients of any regular menu in your home. However, with the right resources and planning, you can take advantage of an age-old method of storage that will allow you to buy fruits and vegetables when they are least expensive or to grow your own and store them for future use. This book will walk anyone through the process of building and using a root cellar to store their fruits and vegetables for later use, through the cold winter months when even the most basic items can cost an arm and a leg. Before even starting your root cellar, you will learn the basics of choosing the right crops and planting them at the right time or buying them in advance for your root cellar. You will learn how to know which crops and which specific vegetables and fruits are good to keep and which ones should be left alone. This book will cover how and when to bring in the harvest and how to prepare for storage effectively. You will learn the basics of spoilage and what to expect from your foods, and you will discover what you should expect each winter for multiple-month storage. You will also benefit from interviews with the top experts in the field of storage and root-cellarling and farmers who have been storing vegetables for years. You will learn how to start your own underground garden and what various types of cellars exist trenches, closets, and hideaways. Discover how to start planning your root cellar, how to use your basement if you so desire, and how to start excavating and preparing an outside, isolated root cellar for the first harvest. No matter your situation or your crops, you can benefit from this book and its take on the world of root-cellarling and long-term fruit and vegetable storage. As a registered nurse for the last 28 years, my primary clinical expertise has been working in the pre-hospital environment as a flight nurse and a paramedic, as well as continuing to work in a variety of clinical areas which include the emergency department, pediatrics and endoscopy. My extensive clinical background has also given me the opportunity to work as a legal nurse consultant with one of the largest law firms in Arizona. As an EMS educator and program director of paramedic training programs for the last 20 years and most recently as the National Clinical Educator for one of the largest air medical transport companies, I truly enjoy teaching in a simple manner as to assure that students do have a strong basic understanding in making critical care decisions and that they will be providing the highest quality of patient care beginning from the least to the most invasive management of care for the patients they are transporting. My goal as a professional and as an EMS educator has always been and will continue to encourage students to have the desire to learn and grow in their profession, as well as contribute to EMS in a way that inspires positive change.
