Innovation isn't what it used to be. Traditionally a synonym for sophistication, hi-tech and expense, today it means seeking frugality, mining segments that the competition has abandoned and accessing new customers whose modest incomes meant they were once ignored. The West used to conceptualise innovation for its own purposes. Today, it is being developed increasingly far - and soon by - the emerging world. The Logan's adventure epitomises these new innovation trajectories and outlines new frontiers for its industry. The question then becomes how and why a company like Renault chose this path; how it withstood so many surprises and obstacles to become one most spectacular success stories of the early 21 st century; and whether this success might destabilise European industrialists' traditional development model. Following an in-depth investigation behind the scenes at Renault and Dacia, the book's three authors - economists and managers specialised in the automotive industry - provide an answer to these and other questions. Beyond the automotive sector, the book is also useful to anyone tracking current upheavals in the world's economic equilibrium and interested in how corporate innovation processes might contribute to this trend.

"Set against the backdrop of World War I, with Western Civilization on the edge of calamity, the first installment in "The Explorers Guild" series, "A Passage to Shambhala," concerns the Guild's quest to find the golden city of Buddhist myth. The search will take them from the Polar North to the Mongolian deserts, through the underground canals of Asia to deep inside the Himalayas, before the fabled city finally divulges its secrets and the globe-spanning journey plays out to its startling conclusion."--Provided by publisher.

This book offers a critical analysis of recent developments in the automotive industry of East-Central Europe (ECE). Economists, industry specialists and national governments have considered the rapid development of the automotive industry in ECE in the past twenty years an unqualified success. This rapid growth has been based on large inflows of foreign direct investment (FDI) from Western Europe, North America, Japan and South Korea, and it significantly contributed to GDP growth, created thousands of new jobs, and completely transformed the previously existing automotive industry in the region. This volume offers an analysis that goes beyond uncritical celebratory accounts of this rapid growth. It is based on original, detailed firm-level research conducted by the author in Czechia and Slovakia between 2009 and 2015 that covered assembly firms and the networks of component suppliers. Theoretically and conceptually, the analysis will draw on the global production networks and global value chains perspectives. Drawing on the original empirical data and on additional available information, this volume concentrates on several important questions related to the development of the automotive industry in ECE in the 2000s:• The role of FDI in the rapid development of the automotive industry after 1990 and particularly in the 2000s.• The upgrading of the automotive industry in East-Central Europe through FDI• The position of ECE in the automotive industry research and development (R&D)• The effects of the 2008-2009 economic crisis in the automotive industry of ECE.• The role of state in the rapid development of the automotive industry in ECE in the 1990s and 2000s.• The effects of FDI on domestic firms in the form of linkages between foreign-owned and domestic firms and spillovers from foreign-owned to domestic firms.

I have physical scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). It wasn't until my mother died was I able to "catch my breath" and to make sense of or process the emotional pain I had endured due to her prescription drug addiction, resulting in my own addictions.
