This volume discusses both the latest experimental research in bioelectrosynthesis and current applications. Beginning with an introduction into the “electrification of biotechnology” as well as the underlying fundamentals, the volume then discusses a wide range of topics based on the interfacing of biotechnological and electrochemical reaction steps. It includes contributions on the different aspects of bioelectrochemical applications for synthesis purposes, i.e. the production of fine and platform chemicals based on enzymatically or microbially catalyzed reactions driven by electric energy. The volume finishes with a summary and outlook chapter which gives an overview of the current status of the field and future perspectives. Edited by experts in the field, and authored by a wide range of international researchers, this volume assesses how research from today’s lab bench can be developed into industrial applications, and is of interest to researchers in academia and industry.

First Published in 1967. Routledge is an imprint of Taylor & Francis, an informa company.

A review is provided which covers the development, present status, and future outlook of biochemical fuel cell research. Its contents include: Bioelectrochemistry; Biofuel cells; (Fuels for Biofuel cells, Oxidation agents for biofuel cells, Organisms for biofuel cells, Classification of biofuel cells, Electrochemical and biological metabolism, Interelectrode separation, Suitability of materials used in Biofuel Cells, The influence of the Electrode on the Biological Substance); Biogalvanic cells; Biosolar cells; Bioanodes; Biocathodes; Some types of biofuel cells (Biofuel cell urea-oxygen-urease, Biofuel cell lactate-atmospheric oxygen); Comparison of biofuel cells with fuel cells (Advantages of biofuel cells over fuel cells, Drawbacks of biofuel cells in comparison with fuel cells); The medium of the ocean as a giant biofuel cell.
