For over ten years, Race and Ethnicity in Latin America has been an essential text for students studying the region. This second edition adds new material and brings the analysis up to date. Race and ethnic identities are increasingly salient in Latin America. Peter Wade examines changing perspectives on Black and Indian populations in the region, tracing similarities and differences in the way these peoples have been seen by academics and national elites. Race and ethnicity as analytical concepts are re-examined in order to assess their usefulness. This book should be the first port of call for anthropologists and sociologists studying identity in Latin America.

Online communities generate massive volumes of natural language data and the social sciences continue to learn how to best make use of this new information and the technology available for analyzing it. Text Mining brings together a broad range of contemporary qualitative and quantitative methods to provide strategic and practical guidance on analyzing large text collections. This accessible book, written by a sociologist and a computer scientist, surveys the fast-changing landscape of data sources, programming languages, software packages, and methods of analysis available today. Suitable for novice and experienced researchers alike, the book will help readers use text mining techniques more efficiently and productively. Available with Perusall—an eBook that makes it easier to prepare for class Perusall is an award-winning eBook platform featuring social annotation tools that allow students and instructors to collaboratively mark up and discuss their SAGE textbook. Backed by research and supported by technological innovations developed at Harvard University, this process of learning through collaborative annotation keeps your students engaged and makes teaching easier and more effective. Comprensión y Discurso. Del Movimiento Ocular al Procesamiento Cognitivo es un libro compuesto por diecisiete capítulos, todos centrados en los procesos de comprensión textual con el empleo de una técnica metodológica no nueva, pero sí de uso relativamente reciente en la investigación en el mundo hispano y latinoamericano: el seguimiento y registro de los movimientos oculares o eyetracking (por su nombre en inglés). A través de los diecisiete capítulos se traza un recorrido incremental desde el procesamiento de palabras, enunciados, textos y géneros preferentemente verbales, hasta aquellos multimodales y multimediales, desde el español como lengua materna y el inglés como lengua segunda o extranjera. Se reporta así un panorama científico actualizado, tanto en lo teórico, en lo metodológico como de hallazgos empíricos robustos.

For the general reader, investigating the surprising connection between stars, our planet and life.

Otherness is a collection of essays that explore the concept of otherness in various contexts. The book is divided into three sections: "Otherness in Literature," "Otherness in Culture," and "Otherness in Society." The essays in this collection explore the concept of otherness in various contexts, including literature, culture, and society. The book is a valuable resource for anyone interested in the concept of otherness and its implications for our world.

This book addresses contemporary discourses on a wide variety of topics related to the ideological and epistemological changes of the 19th, 20th and 21st centuries, and the ways in which they have shaped the Spanish language and cultural manifestations in both Spain and Hispanic America. The majority of the chapters are concerned with 'otherness' in its various dimensions; the alien Other – foreign, immigrant, ethnically different, disempowered, female or minor – as well as the Other of different sexual orientation and/or ideology. Following Octavio Paz, otherness is expressed as the attempt to find the lost object of desire, the frustrating endeavour of the androgynous Plato wishing to embrace the other half of Zeus, who in his wrath, tore off from him. Otherness compels human beings to search for the complement from which they were severed. Thus a male joins a female, his other half, the only half that not only fills him but which allows him to return to the unity and reconciliation which is restored in its own perfection, formerly altered by divine will. As a result of this transformation, one can annul the distance that keeps us away from that which, not being our own, turns into a source of anguish. The clashing diversity of all things requires the human predisposition to accept that which is different. Such a predisposition is an expression of epistemological, ethical and political aperture. The disposition to co-exist with the different is imagined in the de-anthropocentricization of the bonds with all living realms. And otherness is, in some way, the reflection of sameness (mismidad). The other is closely related to the self, because the vision of the other implies a reflection about the self; it implies, consciously or not, a relationship with the self. These topics are addressed in this book from an interdisciplinary perspective, encompassing arts, humanities and social sciences.

A reprint of the 1976 Macmillan edition. This fictional outline of a modern utopia has been a center of controversy ever since its publication in 1948. Set in the United States, it pictures a society in which human problems are solved by a scientific technology of human conduct.

[In this book, the author's] analysis of the effects and causes of capitalist underdevelopment in Latin America present [an] account of ... Latin American history. [The author] shows how foreign companies reaped huge profits through their operations in Latin America. He explains the politics of the Latin American bourgeoisies and their subservience to foreign powers, and how they interacted to create increasingly unequal capitalist societies in Latin America.-Back cover.

A prescient warning of a future we now inhabit, where fake news stories and Internet conspiracy theories play to a disaffected American populace "A glorious book... A spirited defense of science... From the first page to the last, this book is a manifesto for clear thought." —Los Angeles Times How can we make intelligent decisions about our increasingly technology-driven lives if we don't understand the difference between the myths of pseudoscience and the testable hypotheses of science? Pulitzer Prize-winning author and distinguished astronomer Carl Sagan argues that scientific thinking is critical not only to the pursuit of truth but to the very well-being of our democratic institutions. Casting a wide net through history and culture, Sagan examines and authoritatively debunks such celebrated fallacies of the past as witchcraft, faith healing, demons, and UFOs. And yet, disturbingly, in today's so-called information age, pseudoscience is burgeoning with stories of alien abduction, channeling past lives, and communal hallucinations commanding growing attention and respect. As Sagan demonstrates with lucid eloquence, the siren song of unreason is not just a cultural wrong turn but a dangerous plunge into darkness that threatens our most basic freedoms. Praise for The Demon-Haunted World "Powerful... A stirring defense of informed rationality... Rich in surprising information and beautiful writing." —The Washington Post Book World "Compelling." —USA Today "A clear vision of what good science means and why it makes a difference... A testimonial to the power of science and a warning of the dangers of unrestrained credulity." —The Sciences "Passionate." —San Francisco Examiner-Chronicle
