Evidence-Based Medicine and Clinical Guidelines. Physicians have always felt that their decisions were based on evidence; thus, the current term "evidence-based medicine" is somewhat of a misnomer. However, for many clinicians, the "evidence" is often a vague combination of recollected strategies effective in previous patients, advice given by mentors and colleagues, and a general impression of "what is being done" based on random journal articles, abstracts, symposia, and ...

As new findings emerge, there is an urgent need for up-to-date management guidelines. In response to this call, we review what is currently known regarding the management of COVID-19, and offer an evidence-based review of current practice.

Evidence-based management guideline for the COVID-19 - - -

Evidence-based guidelines, also called clinical practice guidelines, "are systematically developed statements to assist practitioner and patient decisions about appropriate health care for specific clinical circumstances" (Institute of Medicine; 1990, p. 38 1; 2001, p. 151 2). According to the National Guideline Clearinghouse (NGC), sponsored by the Agency on Healthcare Research and Quality (AHRQ), such "guidelines are not fixed protocols that must be followed" (NGC, 2007) but are intended ...

Evidence-based practice guidelines aim to support all groups involved in the care of patients with anorexia nervosa by providing them with scientifically sound recommendations regarding diagnosis and treatment. The German S3-guideline for eating disorders has been recently revised. In this paper, the new guideline is presented and changes, in comparison with the original guideline published in 2011, are discussed. Further, the German guideline is compared to current international evidence ...

Treatment of Anorexia Nervosa New Evidence-Based Guidelines

Treatment of IMCD is challenging, and outcomes can be poor because no uniform treatment guidelines exist, few systematic studies have been conducted, and no agreed upon response criteria have been described. The purpose of this paper is to establish consensus, evidence-based treatment guidelines based on the severity of IMCD to improve outcomes.

Evidence-based psychological interventions can be effective treatments for anxiety disorders. They are recommended first-line treatments in preference to pharmacological treatment. Healthcare professionals should usually offer or refer for the least intrusive, most effective intervention first, in line with the stepped-care approach set out in the NICE guidance.
