

Higher Regulators Algebraic K Theory And Zeta Functions Of Elliptic Curves Crm Monograph

As recognized, adventure as well as experience roughly lesson, amusement, as well as deal can be gotten by just checking out a book **higher regulators algebraic k theory and zeta functions of elliptic curves crm monograph** as well as it is not directly done, you could acknowledge even more something like this life, vis--vis the world.

We present you this proper as without difficulty as easy exaggeration to get those all. We have enough money higher regulators algebraic k theory and zeta functions of elliptic curves crm monograph and numerous book collections from fictions to scientific research in any way. accompanied by them is this higher regulators algebraic k theory and zeta functions of elliptic curves crm monograph that can be your partner.

Buy Higher Regulators, Algebraic K-theory and Zeta Functions of Elliptic Curves (CRM Monograph) (CRM Monographs) by Spencer J. Bloch (ISBN: 9780821821145) from Amazon's Book Store. Everyday low prices and free delivery on eligible orders.

Higher Regulators, Algebraic K-theory and Zeta Functions ...

A 'higher' regulator refers to a construction for a function on an algebraic K-group with index $n > 1$ that plays the same role as the classical regulator does for the group of units, which is a group K^1 . A theory of such regulators has been in development, with work of Armand Borel and others. Such higher regulators play a role, for example, in the Beilinson conjectures, and are expected to occur in evaluations of certain L-functions at integer values of the argument. See also Beilinson ...

Higher Regulators, Algebraic K-Theory, and Zeta ...

Abstract We present an introduction (with a few proofs) to higher algebraic K-theory of schemes based on the work of Quillen, Waldhausen, Thomason and others. Our emphasis is on the application of triangulated category methods in algebraic K-theory. 1 Introduction These are the expanded notes for a course taught by the author at the Sedano Winter School

Higher Algebraic K-Theory (After Quillen, Thomason and Others)

Algebraic K-groups are used in conjectures on special values of L-functions and the formulation of a non-commutative main conjecture of Iwasawa theory and in construction of higher regulators. [69] Parshin's conjecture concerns the higher algebraic K -groups for smooth varieties over finite fields, and states that in this case the groups vanish up to torsion.

Higher Regulators, Algebraic K-Theory, and Zeta ...

In the context of arithmetic geometry a higher regulator, or just regulator for short, is a homomorphism from algebraic K-theory to a suitable ordinary cohomology theory. (It makes sense to think that it "regulates" cocycles in algebraic K-theory , which tend to be hard to analyze, to become cocycles in ordinary cohomology, about which typically more may be said.)
