The enhanced growth of the host is due to stimulation of growth-promoting molecules secreted by the parasites. Host reaction: In immuno-parasitology, the animal is the host and the parasite is either self (by molecular memory) or non-self (foreign). When a host recognizes the parasite as non-self, it generally reacts against the invader in two ways:

Receptor IL-10R is vital to coordinating the body's immune response to whipworms, preventing uncontrolled infection and gut lining damage. A new study has identified the master regulator that maintains a healthy gut and limits damage by parasitic whipworms. Researchers from the Wellcome Sanger Institute and collaborators have revealed that the interleukin 10 receptor (IL-10R) is critical to prevent uncontrolled whipworm infection in mice and a damaging immune response in the gut.
