This book is for the lonely people who can't get a da...hold on...wrong book..."I Hate PHP" is for webmasters and designers who have always wondered what PHP could do for them; someone who wants to "do" some PHP and not outsource it. It is best to be familiar with HTML and writing / deciphering HTML code. Unlike other PHP books on the market, we are not going to attempt to cover every single facet of the Wide World of PHP Language. No, we want to grasp the basics of the language, get familiar with it, and get some real-life examples not have the whole thing shoved down our throat! I hate PHP is a complete beginner's guide to the PHP scripting language, once you complete the course detailed within you will have a fundamental knowledge of everything you need to know to get started in creating dynamic, database driven web pages.

The Age of Ideation describes and outlines and introduces a modeling paradigm and science for changing possibilities and relationships. It outlines and provides the models to describe and measure the outcomes of Human Ideation and interactions. This is another groundbreaking title from Dr. Robert Carkhuff.

Spotlights small and pivotal experiments that changed the course of science, including information on the study of guinea pigs, passion flowers, zebra fish, and viruses.

Turbulence is the most fundamental and, simultaneously, the most complex form of fluid flow. However, because an understanding of turbulence requires an understanding of laminar flow, both are explored in this book. Groundwork is laid by careful delineation of the necessary physical, mathematical, and numerical requirements for the studies which follow, and include discussions of N-body problems, classical molecular mechanics, dynamical equations, and the leap frog formulas for very large systems of second order ordinary differential equations. Molecular systems are studied first in both two and three dimensions. Extension into the large is also of great interest, and it is for this purpose that we develop particle mechanics, which uses lump massing of molecules. All calculations are limited to a personal scientific computer, so that the methods can be utilized readily by others.

Lessons learned in the last several years have given clear indications that the prediction and efficient monitoring of disasters is one of the critical factors in decision-making process. In this respect space-based technologies have the great potential of supplying information in near real time. Earth observation satellites have already demonstrated their flexibility in providing data to a wide range of applications: weather forecasting, person and vehicle tracking, alerting to disaster, forest fire and flood monitoring, oil spills, spread of desertification, monitoring of crop and forestry damages. This book focuses on a wider utilisation of remote sensing in disaster management. The discussed aspects comprise data access/delivery to the users, information extraction and analysis, management of data and its integration with other data sources (airborne and terrestrial imagery, GIS data, etc.), data standardization, organisational and legal aspects of sharing remote sensing information.

The Abhidharma is a collection of Buddhist scriptures that investigate the workings of the mind and the states of human consciousness. In this book, Chögyam Trungpa shows how an examination of the formation of the ego provides us with an opportunity to develop real intelligence. Trungpa also presents the practice of meditation as the means that enables us to see our psychological situation clearly and directly.
