Leonard Meyer proposes a theory of style and style change that relates the choices made by composers to the constraints of psychology, cultural context, and musical traditions. He explores why, out of the abundance of compositional possibilities, composers choose to replicate some patterns and neglect others. Meyer devotes the latter part of his book to a sketch-history of nineteenth-century music. He shows explicitly how the beliefs and attitudes of Romanticism influenced the choices of composers from Beethoven to Mahler and into our own time. "A monumental work. . . . No one else could have brought off this immense project with anything like Meyer's command."—Robert P. Morgan, Music Perception "Anyone who attempts to deal with Romanticism in scholarly depth must bring to the task not only musical and historical expertise but unquenchable optimism. Because Leonard B. Meyer has those qualities in abundance, he has been able to offer fresh insight into the Romantic concept."—Donal Henahan, New York Times

Classification of musical structures have long intrigued both musicians and mathematicians. Mathematical models can be found from theoretical analysis to actual composition or sound production. Increasingly in the last few decades, musical scholarship has incorporated modern mathematical content. One example is the application of methods from Algebraic Combinatorics, or Topology and Graph Theory, to the classification of different musical objects. However, these applications of mathematics in the understanding of music have also led to interesting open problems in mathematics itself. The reach and depth of the contributions on mathematical music theory presented in this volume is significant. Each contribution is in a section within these subjects: (i) Algebraic and Combinatorial Approaches; (ii)

engaged. While many of the theoretical tools for analyzing twentieth century music have been devised to analyze atonal music, they may also provide insight into a much broader array of styles. This text capitalizes on this idea by using the theoretical devices associated with atonality to explore music inclusive of a large number of schools and contains examples by such stylistically diverse composers as Paul Hindemith, George Crumb, Ellen Taffe Zwilich, Steve Reich, Michael Torke, Philip Glass, Alexander Scriabin, Ernest Bloch, Igor Stravinsky, Béla Bartók, Sergei Prokofiev, Arnold Schoenberg, Claude Debussy, György Ligeti, and Leonard Bernstein. This textbook also provides a number of analytical, compositional, and written exercises. The aural skills supplement and online aural skills trainer on the companion website allow students

Completed in Paris in 1375, this important manuscript combining several musical treatises was kept in private hands until the 1960s, when it was sold to the University of California at Berkeley and at last became readily accessible to scholars. This is the first complete edition and translation of the manuscript to be published, and extensive notes, a critical introduction, and indexes rerum et verborum augment the volume. Inasmuch as some of the treatises

appear in later manuscripts located in Britain, Belgium, and Italy, full collations are provided. An appendix reviews more distantly related manuscripts. This edition will make widely available a collection of treatises that has already revised the history of music theory and practice. The treatises collected in the Berkeley Manuscript (olim Phillipps 4450) consider topics as fundamental and diverse as counterpoint, notation, tuning, chant, and speculative matters, for example, the history of the development of the scale. There is thorough coverage of the doctrine of *coiuncta*, which provides a means for accounting for chromatic accidentals in music, previously thought to be an invention of a century later. The discussion of tuning suggests the possibility of equal temperament some two centuries earlier than had been assumed. Two
