We know that our world is undergoing seismic change—but how can we emerge from the crisis a fairer, more equal society? Over the past two centuries or so, capitalism has undergone profound changes—economic cycles that veer from boom to bust—from which it has always emerged transformed and strengthened. Surveying this turbulent history, Paul Mason 's Postcapitalism argues that we are on the brink of a change so big and so profound that this time capitalism itself, the immensely complex system within which entire societies function, will mutate into something wholly new. At the heart of this change is information technology, a revolution that is driven by capitalism but, with its tendency to push the value of much of what we make toward zero, has the potential to destroy an economy based on markets, wages, and private ownership. Almost unnoticed, in the niches and hollows of the market system, swaths of economic life are beginning to move to a different rhythm. Vast numbers of people are changing how they behave and live, in ways contrary to the current system of state-backed corporate capitalism. And as the terrain changes, new paths open. In this bold and prophetic book, Mason shows how, from the ashes of the crisis, we have the chance to create a more socially just and sustainable economy. Although the dangers ahead are profound, he argues that there is cause for hope. This is the first time in human history in which, equipped with an understanding of what is happening around us, we can predict and shape the future.

"In the tradition of No Logo and Empire, Postcapitalism is a sharply polemical but deeply analytical and historically informed account of the transition from capitalism to a new economic order"--

From Paul Mason, the award-winning Channel 4 presenter, Postcapitalism is a guide to our era of seismic economic change, and how we can build a more equal society. Over the past two centuries or so, capitalism has undergone continual change - economic cycles that lurch from boom to bust - and has always emerged transformed and strengthened. Surveying this turbulent history, Paul Mason wonders whether today we are on the brink of a change so big, so profound, that this time capitalism itself, the immensely complex system by which entire societies function, has reached its limits and is changing into something wholly new. At the heart of this change is information technology: a revolution that, as Mason shows, has the potential to reshape utterly our familiar notions of work, production and value; and to destroy an economy based on markets and private ownership - in fact, he contends, it is already doing so. Almost unnoticed, in the niches and hollows of the market system, whole swaths of economic life are changing.. Goods and services that no longer respond to the dictates of neoliberalism are appearing, from parallel currencies and time banks, to cooperatives and self-managed online spaces. Vast numbers of people are changing their behaviour, discovering new forms of ownership, lending and doing business that are distinct from, and contrary to, the current system of state-backed corporate capitalism. In this groundbreaking book Mason shows how, from the ashes of the recent financial crisis, we have the chance to create a more socially just and sustainable global economy. Moving beyond capitalism, he shows, is no longer a utopian dream. This is the first time in human history in which, equipped with an understanding of what is happening around us, we can predict and shape, rather than simply react to, seismic change.

A passionate defence of humanity and a work of radical optimism from the international bestselling author of Postcapitalism How do we preserve what makes us human in an age of uncertainty? Are we now just consumers shaped by market forces? A sequence of DNA? A collection of base instincts? Or will we soon be supplanted by algorithms and A.I. anyway? In Clear Bright Future, Paul Mason calls for a radical, impassioned defence of the human being, our universal rights and freedoms and our power to change the world around us. Ranging from economics to Big Data, from neuroscience to the culture wars, he draws from his on-the-ground reporting from mass protests in Istanbul to riots in Washington, as well as his own childhood in an English mining community, to show how the notion of humanity has become eroded as never before. In this book Paul Mason argues that we are still capable - through language, innovation and co-operation - of shaping our future. He offers a vision of humans as more than puppets, customers or cogs in a machine. This work of radical optimism asks: Do you want to be controlled? Or do you want something better?

Is there life after capitalism? In this creatively argued follow-up to their book The End of Capitalism (As We Knew It), J. K. Gibson-Graham offer already existing alternatives to a global capitalist order and outline strategies for building alternative economies. A Postcapitalist Politics reveals a prolific landscape of economic diversity—one that is not exclusively or predominantly capitalist—and examines the challenges and successes of alternative economic interventions. Gibson-Graham bring together political economy, feminist poststructuralism, and economic activism to foreground the ethical decisions, as opposed to structural imperatives, that construct economic " development " pathways. Marshalling empirical evidence from local economic projects and action research in the United States, Australia, and Asia, they produce a distinctive political imaginary with three intersecting moments: a politics of language, of the subject, and of collective action. In the face of an almost universal sense of surrender to capitalist globalization, this book demonstrates that postcapitalist subjects, economies, and communities can be fostered. The authors describe a politics of possibility that can build different economies in place and over space. They urge us to confront the forces that stand in the way of economic experimentation and to explore different ways of moving from theory to action. J. K. Gibson-Graham is the pen name of Katherine Gibson and Julie Graham, feminist economic geographers who work, respectively, at the Australian National University in Canberra and the University of Massachusetts Amherst.

A major new manifesto for the end of capitalism Neoliberalism isn ' t working. Austerity is forcing millions into poverty and many more

into precarious work, while the left remains trapped in stagnant political practices that offer no respite. *Inventing the Future* is a bold new manifesto for life after capitalism. Against the confused understanding of our high-tech world by both the right and the left, this book claims that the emancipatory and future-oriented possibilities of our society can be reclaimed. Instead of running from a complex future, Nick Srnicek and Alex Williams demand a postcapitalist economy capable of advancing standards, liberating humanity from work and developing technologies that expand our freedoms. This new edition includes a new chapter where they respond to their various critics.

*Incisive* grassroots account of the new global revolutions by acclaimed BBC journalist. The world is facing a wave of uprisings, protests and revolutions: Arab dictators swept away, public spaces occupied, slum-dwellers in revolt, cyberspace buzzing with utopian dreams. Events we were told were consigned to history—democratic revolt and social revolution—are being lived by millions of people. In this compelling new book, Paul Mason explores the causes and consequences of this great unrest. From Cairo to Athens, Wall Street and Westminster to Manila, Mason goes in search of the changes in society, technology and human behavior that have propelled a generation onto the streets in search of social justice. In a narrative that blends historical insight with first-person reportage, Mason shines a light on these new forms of activism, from the vast, agile networks of cyberprotest to the culture wars and tent camps of the #occupy movement. The events, says Mason, reflect the expanding power of the individual and call for new political alternatives to elite rule and global poverty.

*Post-Capitalist Society* provides an analysis of the transformation of the world into a post-capitalist society. This transformation, which will not be completed until 2010 or 2020, has already changed the political, economic, social, and moral landscape of the world. The book reviews and revises the social, economic, and political history of the Age of Capitalism and of the nation state. It argues that the real and controlling resource and the absolutely decisive 'factor of production' is neither capital, nor land, nor labor. It is knowledge. Instead of capitalists and proletarians, the classes of the post-capitalist society are knowledge workers and service workers. This book covers a wide range of topics, dealing with post-capitalist society; with post-capitalist polity; and with new challenges to knowledge itself. The focus is on the developed countries—on Europe, on the United States and Canada, on Japan and the newly developed countries on the mainland of Asia, rather than on the developing countries of the Third World. The areas of discussion—Society, Polity, and Knowledge—are arrayed in order of predictability.

Presents a sobering account of the global financial collapse that has pushed the world economy toward a major recession, identifying what the author believes to be the sources of the collapse while making cautionary predictions about a potential rise of hyper-regulated capitalism.

Throughout the Western world, governments and financial elites responded to the financial crisis of 2008 by trying to restore the conditions of business as usual, but the economic, social and human damage inflicted by the crisis has given rise to a reconsideration of the inevitability of unfettered capitalism as a fact of life. A number of economic practices and organizations emerged in Europe and the United States that embodied alternative values: the value of life over the value of money; the effectiveness of cooperation over cut-throat competition; the social responsibility of corporations and responsible regulation by governments over the short-term speculative strategies that brought the economy to the brink of catastrophe. This book examines the blossoming of innovative new experiments in organizing work and life that emerged in the wake of the financial crisis: cooperatives, barter networks, ethical banking, community currencies, shared time banks, solidarity networks, sharing of goods, non-monetary transactions, etc., experiments that paved the way for the emergence of a sharing economy in all domains of activity oriented toward the satisfaction of human needs. Other innovations included the creation of cryptographic virtual currencies, epitomized by bitcoin, which blended a libertarian, entrepreneurial spirit with information technology to provide an alternative to standard forms of currency. On the basis of a cross-cultural analysis of alternative economic practices, this book develops an important theoretical argument: that the economy, as a human practice, is shaped by culture, and that the diversity of cultures, as revealed in a time of crisis, implies the possibility of different economies depending on the values and power relations that define economic institutions. This book will be of great interest to students and scholars in sociology, economics and the social sciences generally, and to anyone who wishes to understand how our societies and economies are changing today.
