They outline a comprehensive plan to reform medical education, research funding and protocols, and the process for approving new drugs that will ensure that more of what gets done in doctors' offices and hospitals is truly effective.

In this report The Breast Cancer Research Foundation (BCRF) and the Institute of Medicine (IOM) present a one-day symposium that was held at the IOM to further disseminate the conclusions and recommendations of the joint IOM and National Research Council report, Saving Women's Lives: Strategies for Improving Breast Cancer Detection and Diagnosis. The committee assembled for this event was asked to share insights and consider ways in which the objectives of the report could be achieved from the standpoint of what women need to know, the best models of screening programs, manpower, risk stratification, basic research, and payment. This symposium seeks to provide continuing food for thought and ideas for actions in support of breast cancer detection and diagnosis and saving women's lives.

In 1890, Professor Arthur Willis Goodspeed, a professor of physics at Pennsylvania USA was working with an English born photographer, William N Jennings, when they accidentally produced a Röntgen Ray picture. Unfortunately, the significance of their findings were overlooked, and the formal discovery of X-rays was credited to Wilhelm Roentgen in 1895. The discovery has since transformed the practice of medicine, and over the course of the past 130 years, the development of new radiological techniques has continued to grow. The impact has been seen in virtually every hospital in the world, from the routine use of ultrasound for pregnancy scans, through to the diagnosis of complex medical issues such as brain tumours. More subtly, X-rays were also used in the discovery of DNA and in military combat, and their social influence through popular culture can be seen in cartoons, books, movies and art. Written by two radiologists who have a passion for the history of their field, The History of Radiology is a beautifully illustrated review of the remarkable developments within radiology and the scientists and pioneers who were involved. This engaging and authoritative history will appeal to a wide audience including medical students studying for the Diploma in the History of Medicine of the Society of Apothecaries (DHMSA), doctors, medical physicists, medical historians and radiographers.

'Radiology Life Support' focuses on the adverse effects and life-threatening emergencies caused by reactions to the contrast media used in every modern radiology department. Such reactions are relatively infrequent yet can be severe and are therefore difficult to identify and then handle safely without training. All radiologists will experience at least a few such reactions throughout their career. This book teaches proper recognition and treatment of adverse contrast reactions, proper use of sedation and analgesic agents, proper management of an airway in an emergency situation and principle concepts in basic and advanced life support (including early defibrillation). The text is based on the successful training course run by the editors and sponsored by the American Roentgen Ray Society. Adverse reactions to contrast agents are somewhat difficult for physicians without practice to identify and then handle effectively. This volume is a useful aid to the identification process.

Emergency radiology requires consistent, timely, and accurate imaging interpretation with the rapid application of clinical knowledge across many areas of radiology practice that have traditionally been fragmented by organ system or modality divisions. This text unifies this body of knowledge into an educational resource capturing the core competencies required of an emergency radiologist. This book of 85 index cases is organized by clinical presentations that simulate real-life radiology practice in the emergency department. Companion cases spanning the differential diagnoses and spectrum of disease provide hundreds more examples for a fast, focused and effective education called COFFEE (Case-Oriented Fast Focused Effective Education). This text can serve as a 'go to' resource for radiologists, as well as any other physicians working in the emergency department. It will be an excellent companion for radiologists preparing for initial board certification or re-certification by the American Board of Radiology.

To succeed in radiology, you not only need to be able to interpret diagnostic images accurately and efficiently; you also need to make wise decisions about managing your practice at every level. Whether you work in a private, group, hospital, and/or university setting, this practical resource delivers the real-world advice you need to effectively navigate day-to-day financial decisions, equipment and computer systems choices, and interactions with your partners and staff. Equips you to make the best possible decisions on assessing your equipment needs - dealing with manufacturers - purchasing versus leasing - and anticipating maintenance costs and depreciation. Helps you to identify your most appropriate options for picture archiving systems and radiology information systems - security issues - high-speed lines - storage issues - workstation assessments - and paperless filmless flow. Offers advice on dealing with departments/clinicians who wish to perform radiological procedures and provides strategies for win-win compromises, drawing the line, inpatient-versus-outpatient considerations, cost and revenue sharing, and more.

Work-life balance isn't about where or how you spend your time. At least not solely. It's about where and how you use and replenish your energy. Work matters. Life matters. Work-life matters. As we start to navigate life during and after the pandemic, employers and employees are increasingly re-evaluating how work can be made more sustainable and more fulfilling. Many employees - particularly Gen X and Gen Z - are seeking a new psychological contract with their employers. Putting these trends into context and offering practical solutions, this book takes a deep dive into why work matters as part of a healthy and fulfilling life. The authors present a new and different way of thinking about the matter of balance, arguing that there is no hard divide between 'work' and life' because 'work' takes place entirely within 'life' and you can't balance two things when one is a subset of the other. To achieve the balance required for a healthy existence, we need to recognise that there are activities in all parts of work-life that drain our energy and others that give us a buzz. Rather than trying to solve the drain of hard work by living it large at the weekend - or compensating for an unfulfilling home life by working like a demon, we need to create balance at work and balance at home. Now is a golden opportunity to re-examine the world of work and job-craft to make them more satisfying, less draining and more energising. The ideas in this book provide a practical guide to help that process.

"A stirring, beautiful memoir that is alternately hilarious and heartbreaking, and ultimately a triumph" from the Wall Street Journal—bestselling author (Publishers Weekly, starred review). Carolyn Jourdan, an attorney on Capitol Hill, thought she had it made. But when her mother has a heart attack, she returns home to the Tennessee mountains, where her father is a country doctor and her mother works as his receptionist. Jourdan offers to fill in for her mother until she gets better. But days turn into weeks as she trades her suits for scrubs and finds herself following hazmat regulations for cleaning up bodily fluids; maintaining composure when confronted with a splinter the size of a steak knife; and tending to the loquacious Miss Hiawatha, whose daily doctor visits are never billed. Most important, though, she comes to understand what her caring and patient father means to her close-knit community. With great humor and great tenderness, Heart in the Right Place shows that some of our biggest heroes are the ones living right beside us. "This is a wonderful book. I would have enjoyed it even if Carolyn wasn't a neighbor of mine in East Tennessee. She is a great writer." —Dolly Parton "With lavish affection, genuine respect, and exuberant humor, Jourdan offers a zestfully compassionate portrait of a poor community rich in the ways of true humanity." —Booklist "A beautiful memoir . . . Making a difference can be as simple as getting up in the morning and helping those around you." —Family Circle

Is it cancer or just a bad pixel? True stories told with the trademark wit and warmth that has earned Jourdan USA Today, Audible, and 5 Wall Street Journal best sellers. "Talking to Skeletons" chronicles seven extraordinary nights Jourdan spent shadowing a radiologist in a teaching hospital and paints an insightful portrait of one man's life and work. It's a uniquely personal tour of a private world that, as a bonus, gives readers an intimate peek at how Jourdan creates her best-selling medical narratives. A lovely and intelligent medical selfie. Jourdan's first-rate medical writing illuminates the mysterious black and white world that stands at the front lines of modern healthcare.
