The UE40ES5500 features the same interface as higher-end Samsung HDTVs, although unsurprisingly, not all of the advanced picture setup controls are present at this price level. Importantly for users who'll calibrate the LED TV with test patterns and a measuring device, there are [White Balance] and [Gamma] options.

The fabulous Samsung UE40ES5500 is a budget oriented 40 inch, Full High Def, Edge Backlight enabled, LED emitting Smart television that confounds all similarly sized market competitors by virtue of its stunning, slim line, One Design flush screen (flush with the TV frame bezel, that is) effect, high calibre of technologies contained within its arsenal of picture performance processes and the sheer range of connection, network and general internet TV apps best described by the Smart TV banner.

User Interface Design and Evaluation provides an overview of the user-centered design field. It illustrates the benefits of a user-centered approach to the design of software, computer systems, and websites. The book provides clear and practical discussions of requirements gathering, developing interaction design from user requirements, and user interface evaluation. The book's coverage includes established HCI topics—for example, visibility, affordance, feedback, metaphors, mental models, and the like—combined with practical guidelines for contemporary designs and current trends, which makes for a winning combination. It provides a clear presentation of ideas, illustrations of concepts, using real-world applications. This book will help readers develop all the skills necessary for iterative user-centered design, and provides a firm foundation for user interface design and evaluation on which to build. It is ideal for seasoned professionals in user interface design and usability engineering (looking for new tools with which to expand their knowledge); new people who enter the HCI field with no prior educational experience; and software developers, web application developers, and information appliance designers who need to know more about interaction design and evaluation. Co-published by the Open University, UK. Covers the design of graphical user interfaces, web sites, and interfaces for embedded systems. Full color production, with activities, projects, hundreds of illustrations, and industrial applications.

Emerson Montgomery, a well-known political commentator, shares his personal views on Martin Wagner, the 45th President of the United States. He compares Wagner to other world leaders and notices similarities. Emerson adds anecdotes from his experience with the president as well as his family and colleagues.  
"Once the threshold of Helheim is crossed, not even gods can escape." The age of Vikings. Savage wild men, dark creatures, and hideous undead are pawns in the war between witches. A hero named Rikard, pays the ultimate price in this conflict... but his fight is far from over. Raised as a draug—an undead killing machine—Rikard is meant to be used as a weapon in the supernatural conflict. But Rikard will not be controlled. And where the draug treads, death follows.

A Big Bear Romance He might growl, but she's not afraid to bite. Hands full taking care of his clan, the last thing this Kodiak bear needs is a woman poking her cute little nose into his affairs. But when she refuses to back down—and shows the courage to stand up to him—he can't resist the allure of a curvy city girl. She's mine. All mine. And when a rival clan thinks to use her to force his paw, he'll show them why never piss off a Kodiak, or threaten what's his. Tammy is convinced all men are scum, even gorgeous ones like Reid Carver. She knows he's hiding something. Something big. She just never expected a real freaking bear hid underneath all those yummy muscles. But when the truth comes out and he tries to scare her off with a roar, she shows him not just bears have bite. Welcome to Kodiak Point, where the wildlife might wear clothes, but animal instinct rules the heart. # 1 Kodiak's Claim , #2 Outfoxed by Love, #3 Polar Bearé , #3.5 Caribou's Gift, #4 Wolf's Capture, #5 Grizzly Love Genre: paranormal romance, werewolf romance, shapeshifter romance, fantasy romance, alpha male, bear romance, military romance, humorous romance, comedy romance, Alaska romance

Captain Alatrists returns in a swashbuckling tale of intrigue, romance and regicide. Captain Alatrists' affair with the beautiful actress Maria de Castro is rankling not only his long-term mistress but also the King of Spain. With loyal companion Inigo distracted by the affections of Angelica, Alatrists becomes embroiled in a series of tussles outside his lover's house. Ambushed by arch-nemesis Malatesta, a skirmish ensues that leads to the death of Maria's other lover – the monarch himself. But behind this tale of sexual jealousy lurks a darker truth. As it becomes clear that both Alatrists and Inigo have been cunningly honey trapped – and that the dead man was an impostor. With a puppet king waiting dutifully in the wings, Alatrists must use all his cunning and swordsmanship guile to prevent the murder of the real king – and his implication in a crime for which he has been perfectly framed.

The core use of language is in face-to-face conversation. This is characterized by rapid turn-taking. This turn-taking poses a number central puzzles for the psychology of language. Consider, for example, that in large corpora the gap between turns is on the order of 100 to 300 ms, but the latencies involved in language production require minimally between 600 ms (for a single word) or 1500 ms (for as simple sentence). This implies that participants in conversation are predicting the ends of the incoming turn and preparing in advance. But how is this done? What aspects of this prediction are done when? What happens when the prediction is wrong? What stops participants coming in too early? If the system is running on prediction, why is there consistently a mode of 100 to 300 ms in response time? The timing puzzle raises further puzzles: it seems that comprehension must run parallel with the preparation for production, but it has been presumed that there are strict cognitive limitations on more than one central process running at a time. How is this bottleneck overcome? Far from being 'easy' as some psychologists have suggested, conversation may be one of the most demanding cognitive tasks in our everyday lives. Further questions naturally arise: how do children learn to master this demanding task, and what is the developmental trajectory in this domain? Research shows that aspects of turn-taking, such as its timing, are remarkably stable across languages and cultures, but the word order of languages varies enormously. How then does prediction of the incoming turn work when the verb (often the informational nugget in a clause) is at the end? Conversely, how can production work fast enough in languages that have the verb at the beginning, thereby requiring early planning of the whole clause? What happens when one changes modality, as in sign languages – with the loss of channel constraints is turn-taking much freer? And what about face-to-face communication amongst hearing individuals – do gestures, gaze, and other body behaviors facilitate turn-taking? One can also ask the phylogenetic question: how did such a system evolve? There seem to be parallels (analogies) in duetting bird species, and in a variety of monkey species, but there is little evidence of anything like this among the great apes. All this constitutes a neglected set of problems at the heart of the psychology of language and of the language sciences. This Research Topic contributes to advancing our understanding of these problems by summarizing recent work from psycholinguists, developmental psychologists, students of dialog and conversation analysis, linguists, phoneticians, and comparative ethologists.

Trouble with Fate Leigh Evans My name is Hedi Peacock and I have a secret. I'm not human, and I have the pointy Fae ears and Weres inner-bitch to prove it. As fairy tales go, my childhood was damn near perfect, all fur and magic until a werewolf killed my father and the Fae executed my mother. I've never forgiven either side. Especially Robson Trowbridge. He was a part-time werewolf, a full-time bastard, and the first and only boy I ever loved. That is, until he became the prime suspect in my father's death... Today I'm a half-breed barista working at a fancy coffee house, living with my loopy Aunt Lou and a temperamental amulet named Merry, and wondering where in the world I'm going in life. A pretty normal existence, considering. But when a pack of Weres decides to kidnap my aunt and force me to steal another amulet, the only one who can help me is the last person I ever thought I'd turn to: Robson Trowbridge. And he's as annoyingly beautiful as I remember. That's the trouble with fate: Sometimes it barks. Other times it bites. And the rest of the time it just breaks your heart. Again...

Bioimpedance and Bioelectricity Basics, 3rd Edition paves an easier and more efficient way for people seeking basic knowledge about this discipline. This book's focus is on systems with galvanic contact with tissue, with specific detail on the geometry of the measuring system. Both authors are internationally recognized experts in the field. The highly effective, easily followed organization of the second edition has been retained, with a new discussion of state-of-the-art advances in data analysis, modelling, endogenous sources, tissue electrical properties, electrodes, instrumentation and measurements. This book provides the basic knowledge of electrochemistry, electronic engineering, physics, physiology, mathematics, and model thinking that is needed to understand this key area in biomedicine and biophysics. Covers tissue impedance from the ground up in an intuitive manner, supported with figures and examples New chapters on electrodes and statistical analysis Discusses in detail dielectric and electrochemical aspects, geometry and instrumentation as well as electrical engineering concepts of network theory, providing a cross-disciplinary resource for engineers, life scientists, and physicists

INTERACT 2009 was the 12th of a series of INTERACT international c- ferences supported by the IFIP Technical Committee 13 on Human-Computer Interaction. This year, INTERACT washeld in Uppsala (Sweden), organizedby the Swedish Interdisciplinary Interest Group for Human-Computer Interaction (STIMDI) in cooperation with the Department of Information Technology at Uppsala University. Like its predecessors, INTERACT 2009 highlighted, both to the academic and to the industrial world, the importance of the human-computer interaction (HCI) area and its most recent breakthroughs on current applications. Both – perience HCI researchers and professionals, as well as newcomers to the HCI field, interested in designing or evaluating interactive software, developing new interaction technologies, or investigating overarching theories of HCI, found in INTERACT 2009 a great forum for communication with people of similar int- ests, to encourage collaboration and to learn. INTERACT 2009 had Research and Practice as its special theme. The r- son we selected this theme is that the research within the field has drifted away from the practicalapplicability of its results and that the HCI practice has come to disregard the knowledge and development within the academic community.
