Don't buy this one, you ninny. Buy the second edition. <http://handbook.snc.guru/>The goal of this book is to cover the standards and best-practices that most Servicenow developers either learn the hard way, or never learn at all: the things that every developer wishes they knew from day one, and which - once learned - will make you a more effective and efficient developer. Do your future self a favor, and read this book! Having an understanding of why a given standard is what it is (and why it's important), will not only make you more likely to adhere to it, but will empower you to apply the logic and underlying concepts to other areas. It'll make you a more effective administrator, developer, or architect. That's that spirit in which this compendium was written: A spirit of teaching and explaining, not simply listing out a series of edicts under the heading of "best-practice". This is a condensed "developer guide", not a complete Servicenow training course in book-form. It assumes that you've already become at least somewhat familiar with the Servicenow platform, and that you already have at least a working knowledge of JavaScript. If you don't yet feel comfortable calling yourself a "Servicenow developer", consider reading another book by Tim to get up to speed: Learning Servicenow (ISBN-13: 978-1785883323) which you can find at the link <http://books.sngEEK.com/>. As long as you have a basic understanding of the Servicenow platform though, think of this book as your roadmap to ensuring that your work in Servicenow will be clean, effective, safe, and robust

What You Will Learn Customize the Servicenow dashboard to meet your business requirements Use Administration and Security Controls to add roles and ensure proper access Manage tables and columns using data dictionaries Learn how application scopes are defined within Servicenow Configure different types of table to design your application Start using the different types of scripting options available in Servicenow Design and create workflows for task tables Use debugging techniques available in Servicenow to easily resolve script-related issues Run scripts at regular time intervals using the Scheduled Script Execution module In Detail Servicenow provides service management for every department in the enterprise, including IT, Human Resources, Facilities, Field Service, and more. This book focuses on all the steps required to develop apps and workflows for any of your business requirements using Servicenow. You will start with the first module, which covers the basics of Servicenow and how applications are structured; how you can customize the dashboard as required; and also how to create users. After you get used to the dashboard, you will move on to the next module, Applications and Tables, where you will learn about working with different tables and how you can create a scope other than the global scope for your application. The next module is Scripting and APIs, where you will learn Scripting in Servicenow and use powerful APIs to develop applications. The final module, Administration Essentials, covers debugging, advanced database features, and scheduled script creation. By the end of the book you will have mastered creating organized and customer-friendly applications Style and approach A step-by-step tutorial to designing applications and workflows with Servicenow
