This volume represents an effort to bring together communities of land-based hydrogeology and marine hydrogeology. The issues of submarine groundwater discharge and its opposite phenomenon of seawater invasion are discussed in this book from the geophysical, geochemical, biological, and engineering perspectives. This is where land hydrogeology and marine hydrogeology overlap. Submarine

groundwater discharge is a rapidly developing research field. The SCOR and LOICZ of the IGBP have recently established a working group for this research. IASPO and IAHS under IUGG also recently formed a new joint committee "Seawater/Groundwater Interactions" to collaborate with oceanographers and hydrologists. The other articles introduce frontier research topics in more typical land and marine environments, such as fluid flow in karst aquifers, the biological aspects of fluids in sedimentary basins and submarine sedimentary formations, respectively, and vigorous fluid flow in subsea formations and their significance in global tectonics. Geochemical characteristics of hydrothermal activities at a number of active continental margins are also reviewed, and multidisciplinary geophysical constraints of the permeability of young igneous oceanic crust are summarized. A variety of driving mechanisms for fluid flow is discussed in land and subsea formations; terrestrial hydraulic gradient, buoyancy driven free convection, tidally induced flow, flow induced by tectonic strain, flow due to sediment compaction.

"A great American tale told with a deft historical eye, painstaking analysis, and a supple clarity of writing." —Jean Baker "My husband considered you a dear friend," Mary Todd Lincoln wrote to Frederick Douglass in the weeks after Lincoln's assassination. The frontier lawyer and the former slave, the cautious politician and the fiery reformer, the President and the most famous black man in America—their lives traced different paths that finally met in the bloody landscape of secession, Civil War, and emancipation. Opponents at first, they gradually became allies, each influenced by and attracted to the other. Their three meetings in the White House signaled a profound shift in the direction of the Civil War, and in the fate of the United States. James Oakes has written a masterful narrative history, bringing two iconic figures to life and shedding new light on the central issues of slavery, race, and equality in Civil War America.

The story of three friends journeying across 2,500 miles of the toughest terrain on the planet in a very old Land Rover called 9Bob. Over two months in 2013, they completed the only north-south crossing of the Congo River Basin in decades, travelling from Kinshasa, in the Democratic Republic of Congo, to Juba, in South Sudan, a journey they had been told repeatedly was 'impossible'. On the way, they faced fierce challenges, ranging from jungle terrain, kleptocracy, fire ants, illegal mining and burrowing parasites, to factional disputes, destroyed bridges, non-existent roads and intense suspicion from local people. These difficulties, and others, found them building rafts and bridges to cross rivers, playing tribal politics, bargaining for Land Rover parts in scrapyards, and conducting makeshift surgery in the jungle--both on 9Bob and on one another. Conjuring all their combined ingenuity and resolve, they got through. But the Congo is raw, and the journey took its toll, exerting a psychological pressure on them that they hadn't expected. And although they all lost something in the Congo, this book is ultimately about the power of teamwork to overcome tremendous odds.

Did Neanderthals have language, and if so, what was it like? Scientists agree overall that the behaviour and cognition of Neanderthals resemble that of early modern humans in important ways. However, the existence and nature of Neanderthal language remains a controversial topic. The first in-depth treatment of this intriguing subject, this book comes to the unique conclusion that, collective hunting is a better window on Neanderthal language than other behaviours. It argues that Neanderthal hunters employed linguistic signs akin to those of modern language, but lacked complex grammar. Rudolf Botha unpacks and appraises important inferences drawn by researchers working in relevant branches of archaeology and other prehistorical fields, and uses a large range of multidisciplinary literature to bolster his arguments. An important contribution to this lively field, this book will become a landmark book for students and scholars alike, in essence, illuminating Neanderthals' linguistic powers.
