A professor of biology and Earth and space science, Peter D. Ward has not only a firm grasp on the reality of climate change but also the rare ability to explain its details in language even I can understand. The Flooded Earth did not leave me feeling particularly hopeful; this threat is real and imminent, with no easy solution. On the other hand, this is a book that puts into perspective our role in the problems and shows us with terrifying clarity where we stand and how we can best prepare ...

The first hopeful book about climate change, The Future Earth shows readers how to reverse the short- and long-term effects of climate change over the next three decades. The basics of climate science are easy. We know it is entirely human-caused. Which means its solutions will be similarly human-led. In The Future Earth, leading climate change advocate and weather-related journalist Eric Holthaus (" the Rebel Nerd of Meteorology " —Rolling Stone) offers a radical vision of our future, specifically how to reverse the short- and long-term effects of climate change over the next three decades. Anchored by world-class reporting, interviews with futurists, climatologists, biologists, economists, and climate change activists, it shows what the world could look like if we implemented radical solutions on the scale of the crises we face. What could happen if we reduced carbon emissions by 50 percent in the next decade? What could living in a city look like in 2030? How could the world operate in 2040, if the proposed Green New Deal created a 100 percent net carbon-free economy in the United States? This is the book for anyone who feels overwhelmed by the current state of our environment. Hopeful and prophetic, The Future Earth invites us to imagine how we can reverse the effects of climate change in our own lifetime and encourages us to enter a deeper relationship with the earth as conscientious stewards and to re-affirm our commitment to one another in our shared humanity.

#1 NEW YORK TIMES BESTSELLER " The Uninhabitable Earth hits you like a comet, with an overflow of insanely lyrical prose about our pending Armageddon."—Andrew Solomon, author of The Noonday Demon With a new afterword It is worse, much worse, than you think. If your anxiety about global warming is dominated by fears of sea-level rise, you are barely scratching the surface of what terrors are possible—food shortages, refugee emergencies, climate wars and economic devastation. An "epoch-defining book" (The Guardian) and "this generation's Silent Spring" (The Washington Post), The Uninhabitable Earth is both a travelogue of the near future and a meditation on how that future will look to those living through it—the ways that warming promises to transform global politics, the meaning of technology and nature in the modern world, the sustainability of capitalism and the trajectory of human progress. The Uninhabitable Earth is also an impassioned call to action. For just as the world was brought to the brink of catastrophe within the span of a lifetime, the responsibility to avoid it now belongs to a single generation--today's. Praise for The Uninhabitable Earth "The Uninhabitable Earth is the most terrifying book I have ever read. Its subject is climate change, and its method is scientific, but its mode is Old Testament. The book is a meticulously documented, white-knuckled tour through the cascading catastrophes that will soon engulf our warming planet."—Farhad Manjoo, The New York Times "Riveting... Some readers will find Mr. Wallace-Wells's outline of possible futures alarmist. He is indeed alarmed. You should be, too."—The Economist "Potent and evocative... Wallace-Wells has resolved to offer something other than the standard narrative of climate change... He avoids the 'eerily banal language of climatology' in favor of lush, rolling prose."—Jennifer Szalai, The New York Times "The book has potential to be this generation's Silent Spring."—The Washington Post "The Uninhabitable Earth, which has become a best seller, taps into the underlying emotion of the day: fear... I encourage people to read this book."—Alan Weisman, The New York Review of Books

Forty years after a devastating flood changed the face of the earth, new consequences and challenges are still surfacing. Twins Will and Annalie thought the hardest part about this year was going to be their separation when bookish Annalie began life at a prestigious Admiralty-run boarding school and avid sailor Will stayed behind in the flood-damaged slums. But that was before the Admiralty raided their father's workshop. Before they sent a questioner to threaten Annalie at school. Before their father disappeared, leaving a single coded clue to his destination. Desperate for answers and to find their father, the twins set out in the family's small sailboat. But though they are both experienced sailors, they have no idea what dangers the sea has in store. In The Flooded Earth, Mardi McConnochie writes adventure at a breakneck pace, drawing readers into a race against pirates, authorities, and the sea itself in a not-so-distant future full of new technology and old human failings.

Believe in climate change. Or don't. It doesn't matter. But you'd better understand this: the best route to rebuilding our economy, our cities, and our job markets, as well as assuring national security, is doing precisely what you would do if you were scared to death about climate change. Whether you're the head of a household or the CEO of a multinational corporation, embracing efficiency, innovation, renewables, carbon markets, and new technologies is the smartest decision you can make. It's the most profitable, too. And, oh yes—you'll help save the planet. In Climate Capitalism, L. Hunter Lovins, coauthor of the bestselling Natural Capitalism, and the sustainability expert Boyd Cohen prove that the future of capitalism in a recession-riddled, carbon-constrained world will be built on innovations that cutting-edge leaders are bringing to the market today. These companies are creating jobs and driving innovation. Climate Capitalism delivers hundreds of in-depth case studies of international corporations, small businesses, NGOs, and municipalities to prove that energy efficiency and renewable resources are already driving prosperity. While highlighting business opportunities across a range of sectors—including energy, construction, transportation, and agriculture technologies—Lovins and Cohen also show why the ex-CIA director Jim Woolsey drives a solar-powered plugin hybrid vehicle. His bumper sticker says it all: "Osama bin Laden hates my car." Corporate executives, entrepreneurs, environmentalists, and concerned citizens alike will find profitable ideas within these pages. In ten information-packed chapters, Climate Capitalism gives tangible examples of early adopters across the globe who see that the low-carbon economy leads to increased profits and economic growth. It offers a clear and concise road map to the new energy economy and a cooler planet.

Life is about more than just surviving... An unforgettable, inventive, and riveting epic saga about a mother, her daughter and their struggle to survive in a post-apocalyptic flooded world, which signals the arrival of an extraordinary new talent. 'An adventure rife with great peril and high emotional stakes, this postapocalyptic novel reads like a fast-paced screenplay; intense, visceral, and relentless.' Library Journal It's 2031, and the world has been utterly transformed. After years of rising floodwaters, all that's left is an archipelago of mountaintop colonies surrounded by a deep expanse of open water. Civilization as it once was is gone. Bands of pirates roam the waters, in search of goods and women to breed. Some join together to create a new kind of society, while others sail alone, barely surviving. Myra and her young daughter, Pearl, survive by fishing from their small boat, visiting small hamlets and towns on dry land to trade for supplies and information. The sole purpose of Myra's existence is to protect Pearl, while mourning the loss of her oldest daughter, Row, who was kidnapped during the last terrifying storm surge. For eight years Myra has searched for the girl that she knows, in her bones and her heart, still lives. In a violent confrontation with a stranger, Myra hears that Row was last seen in a far-off encampment of raiders on the coast of what used to be Greenland. Throwing aside her usual caution, she and Pearl embark on a perilous voyage into the icy northern seas to rescue her. A compulsively readable novel of dark despair and soaring hope. After the Flood is a magnificent, exhilarating, action-packed, and sometimes frightening odyssey laced with wonder – an affecting and wholly original saga, both redemptive and astonishing. "The searing, often brutal story of a mother's terrifying quest to find her missing daughter in a post-apocalyptic world. Haunting and shocking." Liv Constantine, bestselling author of The Last Mrs. Parrish "[A] brilliantly imagined novel about love and desperation, set in an astonishing new world... utterly gripping" Karin Slaughter, international bestselling author of The Last Widow "An intriguing and innovative woman-centered swashbuckling quest narrative" Publishers Weekly
